Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 4-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification and the claims fail to teach how could a *collapsible* and *erectable* viewing *chamber* having just front, rear, top and bottom planar walls, which essentially is just a **box** that is capable of *stereoscopic viewer*. A box will not be able to provide stereoscopic viewing.

Claim Objections

- 3. Claims 3 and 7-8 are objected to because of the following informalities:
- (1). The phrase "the placement of the mask on the same surface as the picture frame" recited in claim 3 is confusing and indefinite since the terms "the mask" and "the picture frame" each lacks proper antecedent basis from the based claim. The phrase "the front and rear panels" recited in claim 3 is also indefinite since it also lacks proper antecedent basis from its based claim. The scopes of the claim are completely unclear.
- (2). The phrase "the left and right side walls" recited in claim 7 is confusing and indefinite since it lacks proper antecedent basis from its based claim.
- (3). The phrase "buckled panel" recited in claim 8 is confusing and indefinite since it is not clear what is considered to be this panel.

1,

Application/Control Number: 10/708,414

Art Unit: 2872

Appropriate correction is required.

Claim Rejections - 35 USC § 102

Page 3

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis

for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on

sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-2 rejected under 35 U.S.C. 102(b) as being anticipated by the patent issued to

Kassawat (PN. 5,940,210).

Kassawat teaches a collapsible stereoscopic viewer (10, Figure 1), for viewing stereo images

placed at an image plane (40, Figure 1), that is located outside the viewer wherein the viewer comprises a

collapsible and erectable housing (11) that serves as the collapsible and erectable viewer chamber

wherein the housing or the chamber is comprised of lens supports (60 and 70) serve as the viewing panel

having a pair of lenses (63 and 73) and front walls (80 and 90) serve as the aperture panel having a pair

of apertures (82 and 92) and a pair of inner walls (16 and 17) or a mask formed into the aperture panel

that serves septum that the light rays from the right and left image of the stereo images are directed to the

right and left eyes respectively to create a stereoscopic vision of the images.

This reference therefore anticipated the claims.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness

rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Application/Control Number: 10/708,414

Art Unit: 2872

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 4

7. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over the patent issued to Kassawat.

The collapsible stereoscopic viewer taught by **Kassawat** as described for claim 1 above has met all the limitations of the claim. The viewer is collapsible, (Figures 3 and 4). The scopes of the claim 3 however are not well defined for the reasons stated above and therefore it cannot be further examined.

8. Claims 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent issued to Rice (PN. 4,846,553).

Rice teaches a *foldable* and *collapsible viewer* that is suitable for *stereoscopic viewing* wherein the viewer is comprised of *front wall* (82, Figure 5), *rear wall* (110), *top wall* (126) and a *bottom wall* (104), which are all of planar walls and are continuously joined and the viewer further comprises *left walls* (96 and 112) and *right walls* (100 and 122) that are joined to front and rear walls but not to top and bottom walls. Rice teaches to have *toggle tabs* formed on the left and right edges of the left walls and therefore the front and rear walls for engaging the walls together to form a viewer chamber, (please see Figures 1-4). However this reference does not teach explicitly that the tabs are formed at the top and bottom walls. But such modifications are considered to be obvious design choice to one skilled in the art since this modification only involves moving the tabs to the top and bottom walls which essentially just changes the manner of joining of the different walls to form the chamber which does not change the function of the chamber at all. One skilled in the art would certainly be able to modify such design so that the chamber is joined in a different manner for the benefit to fit the desire of the user.

With regard to claims 5-8, Rice teaches that the walls are folded to form framing panel and lens panel, (please see Figures 1-4). The toggle tabs are used to lock the chamber in the erected positions and

Application/Control Number: 10/708,414

Art Unit: 2872

the left and right side walls form a seal for preventing the stray light from entering the viewing chamber.

The viewing chamber can be fully flattened in a collapsed state.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should

be directed to Audrey Y. Chang whose telephone number is 571-272-2309. The examiner can normally

be reached on Monday-Friday (8:00-4:30), alternative Mondays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew

Dunn can be reached on 571-272-2312. The fax phone number for the organization where this

application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained

from either Private PAIR or Public PAIR. Status information for unpublished applications is available

through Private PAIR only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
